WHO Says Henipaviruses Are Next Big Threat to Global Population + More: 'This Week' With Mary + Polly

In "This Week" with Mary Holland, Children's Health Defense president on leave, and Polly Tommey, CHD.TV programming manager, Mary and Polly discuss the latest news on COVID-19 vaccines and other issues.

This week, Mary Holland, Children's Health Defense (CHD) president on leave, and Polly Tommey, CHD.TV programming manager, covered the latest headlines on COVID-19, Big Pharma and other issues, including what Polly called an "extraordinary story" on a "bombshell" study of Pfizer-BioNTech COVID-19 vaccine distribution showing vaccine batches could be divided into three groups — one of these groups demonstrated higher-than-normal severe adverse events and a third group appeared to be a placebo.

Polly and Mary also discussed the release of confidential BioNTech documents, which revealed tens of thousands of serious adverse events and thousands of deaths. The documents, dated Aug. 18, 2022, include data from the COVID-19 vaccine clinical trials and post-marketing period from Dec. 19, 2021, to June 18, 2022. Pfizer insisted during this time that they saw no safety signals.

Plus, the Centers for Disease Control and Prevention (CDC) unanimously voted in favor of recommending a 20-valent Pfizer pneumococcal vaccine for children. CDC advisers also approved new respiratory syncytial virus (RSV) immunizations for adults.

Also on tap this week: Some scientists, attempting to identify the source of the next pandemic, point to henipaviruses, such as Langya, as a future threat to the global population. The World Health Organization (WHO) lists the henipavirus family of pathogens on its prioritization list for vaccines and therapeutics in public health emergency contexts.

More of this week's highlights:

- Óscar Cabrera Adames, a 28-year-old pro basketball player, died of a heart attack during a stress test at a health center in the Dominican Republic less than two years after blaming vaccine-induced myocarditis for a collapse on the court.
- Sharing traumatic stories from the pandemic exposes the abuses that took place at the hands of decision-makers. Mary encouraged listeners to "tell their story."
- As the COVID-19 pandemic wanes, the COVAX initiative — a partnership between Gavi, the Vaccine Alliance, the WHO and the Coalition for Epidemic Preparedness Innovations — for delivering vaccines to the world's poorest is left with $2.6 billion to spend.
- In a town hall meeting, Robert F. Kennedy Jr., CHD's president on leave, explained his stance on vaccination, shared statistics on chronic disease and discussed the reality of placebo use in clinical trials — unless proper, long-term, prelicensure placebo-controlled safety studies are done we cannot determine if more harm than good is being done, Kennedy said.
- A U.S. Court of Appeals heard arguments in an appeal challenging the constitutionality of vaccine mandates for students at Rutgers University. For the audience, Mary explained the details of this case, including the claims brought by CHD against Rutgers.
- In a letter to New York City Department of Education Chancellor David Banks, lawmakers asked for clarification of secret "problem codes" assigned to unvaccinated teachers in New York City. This included the purpose and use of the codes, how they were determined, their consequences, whether this information was sent to law enforcement agencies and how the city plans to rectify the situation.
- In Vietnam, the first African swine fever vaccine awaits nationwide authorization. After dozen of pigs died from off-label use of this vaccine, it was temporarily suspended.
- Vaccines for cancer are currently undergoing experimentation. These injections, some of which use mRNA technology, seek to shrink tumors and prohibit recurrent cancer. Mary voiced her concerns about redefining what makes something a "vaccine" and spotlighted the administration of the human papillomavirus (HPV) vaccine as it relates to cervical cancer.
- The U.S. Food and Drug Administration approved two new diabetes drugs for kids. Pediatrician Dr. Elizabeth Mumper offered her perspective on the profit motives behind these new interventions taking the place of chronic disease prevention efforts.
- In a lawsuit against Johnson & Johnson, a California man attributed his cancer diagnosis to the use of the company's baby powder. "It's just horrible — to make a few dollars on a powder … to let people die," said Mary.
- After decades of delays and legal challenges, lawsuits are finally proceeding against Merck's allergy and asthma medication Singulair. The lawsuits alleged the drug is defective and claimed the company failed to warn patients of the risk of mental problems. Death by suicide or neurological suffering in dozens of patients was reported.
- The mother of Jamie Kay Wylie believes her 36-year-old daughter died as a result of COVID-19 protocols, which included the use of remdesivir and a ventilator. "There [are] so many stories like this," Polly pointed out.
- James Corbett, in an interview with Dr. Joseph Mercola, discussed artificial intelligence and its increasing role in state propaganda and shared strategies on how to prepare for government-endorsed weaponized narratives. Hear more from Corbett on "Good Morning CHD."

Well; the WHO doesn't seem to have any problem coming up with new "threats". They tell us that there is currently no vaccine for this one. Didn't they say the same thing at the beginning of "covid"; then miraculously, a couple of months later - boom! We have an "experimental" vaccine!
"Currently, there are no vaccines available against Nipah virus"
"Henipavirus is a genus of negative-strand RNA viruses in the family Paramyxoviridae, order Mononegavirales containing six established species,[1][2] and numerous others still under study.[3]"
So this is all about RNA and every injection from now on, will be mRNA...nah; I'm probably just being paranoid. I forget...what exactly is in those shots?

Whatever happened to Monkeypox and the Avian Flu Virus? Weren't these lies cast not so long ago? I think the WHO is using PSYCHOLOGICAL WARFARE tactics on the public combined with theatrical lying to trigger the world population into ongoing PTSD and to take more poisonous mRNA shots.

What say WE THE PEOPLE DEFUND the WHO and THEN Delete Tedros, Bill Gates and his GAVI/Bill & Melinda Gates Foundation and other officials funding and operating the homicidal WHO? And by delete, YES I mean DELETE - Take them out of the world's population because we don't need people like them, people who think they're God and have absolutely no problem harming or killing people with their "vaccines" and their "authority" given to them by... who? NOT Me that's for damn sure! Did YOU vote these maniacs in? Did YOU give them power over you and your family to force you to live as THEY see fit? Again, I did NOT. Did You? Why do we continue to allow such agencies to rule over our sovereignty? Things like this made NO sense to me as a young child and still makes no sense to me as a nearly 70 yr. old man - oops, am I still allowed to call myself a man or maybe just for today, I identify as a Bull?
Disclaimer:) I don't advocate violence however, in these last few years and the truths that have come out thanks to china sharing covid, violence, sometimes is the only language monsters/criminals/homicidal maniacs understand and fear. It's called fighting fire with fire and that's the way we lived back in the day when thick skin could be considered a survival tool.

Met so many great people at the 4th of July parade - we looked like a bunch of hippies! So much for the mainstream narrative on that one!

I know that is separate from this non profit but I am so grateful to help bring more attention to this debate!

Just saw an email from Dr. Peter A. McCullough, MD, MPH

Here's the exact 1st paragraph:
"A recent pharmaceutical "MAX your VAX" advertisement from the CDC caught my attention for several reasons: 1) the CDC is not a drug company and should not be promoting products from Bavarian Nordic, 2) the national and public health emergencies have expired for Monkeypox on January 31, 2023, 3) the JYNNEOS vaccine has well-recognized risks for heart damage (troponin elevation) and cardiac adverse events of special interest especially in those previously vaccinated against smallpox, 4) the peak age and gender group is men in their twenties and thirties—the same demographic shown in the internet promotion—highest risk for vaccine heart damage."

The entire substack can be found below...
